

CS 440 Meeting Minutes

Group: 11 Date: 9/25/2021 Time: 4 pm Duration: 60 minutes

Present, on time: Jon Heikkinen , Alejandro Cabral , Michael Chau , Alen Peter

Present, not on time:

Absent:

Synopsis:

- Discussed implementation of our database design and best ways to wire in our login/account creation processes. Began discussions on how we would like the user welcome screens to look for each different type of user(Patient/Medical Staff).

Recent Individual Accomplishments:

- Jon created a process for both changing a user's password or their email, as well as added more testing for the login verification process.
- Finished creating code that will check which type the user is when they successfully login.
- Tested part of SQL code.
- Kept the UI simple but user friendly, and correctly labeled. Created the process for login.

Current Individual Activities:

Jon: Local testing for changing user password and email process in order to ensure it works 100% of the time.

Michael: Work on initializing a page once the user gets past the login screen.

Alen: Working on modifying the database as per the requirements of other parts of the project..

Alejandro: Verify tests for login verification

Individual Action Items:

Jon: Link user email/password change with our finalized database implementation. Discuss with Alejandro on how to accomplish this. Implement extra checks to make sure usernames/emails aren't a duplicate of an existing user in the database for all processes that edit or create user's information.

Michael: See if any other features are necessary for medical staff along with initializing the page after login.

Alen: Testing the code for database creation.

Alejandro: Establish a connection to the created database for patients, and medical professionals.
